

CEOI 13th Technology Call

Clarification 1 – Costs for airborne trials and/or launch

Reference: CEOI 13th Call for Earth Observation Technology and Instrument Development Proposals

Date of release: 20th February 2020

The costs of flight trials and/or launch procured through a commercial sub-contract will be funded at the Grant 'intervention rate' (as defined by GBER for industrial partners, or at 80% FEC for academic, government and other research organisations) of the partner procuring the service. Such costs should be justified in Section 5.7 of the proposal and itemised as a 'Direct Cost' in the CEOI Finance Table Excel spreadsheet, on the sheet of the Partner procuring the service.
